

Dental Check-up | Adult

Definition | Percent of adults not visiting a dentist or dental clinic in the last 12 months.

Importance | Untreated dental disease can lead to serious health problems: infection, damage to bone or nerve, and tooth loss.¹ It is recommended that adults and children see a dentist on a regular basis. Professional dental care helps to maintain the overall health of the teeth and mouth, and provides for early detection of pre-cancerous or cancerous lesions.²

Where are we | In 2010 in Douglas County, 23.4% of adults reported not visiting the dentist during the last year. The proportion of adults not visiting the dentist increased from 2008 to 2010. The proportion of adults not visiting the dentist in the last year was less in Douglas County than the state of Kansas and the U.S.

Health Disparities | Among adults in Kansas in 2008:

- Visiting the dentist in the last year increased as education level increased.
- Visiting the dentist in the last year increased as income increased.
- Visiting the dentist was higher in women.
- Visiting the dentist was lower for ages 25-34.
